Fujicolor Crystal Archive Digital Pearl Paper

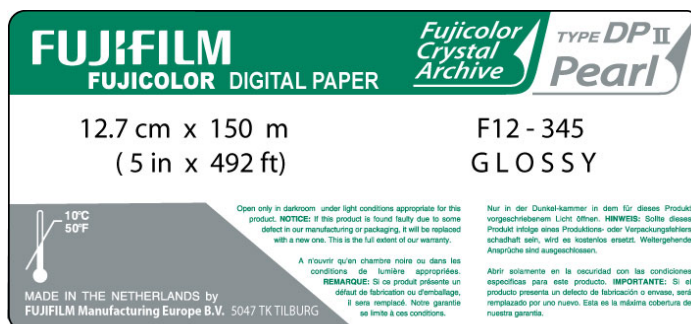

FUJIFILM are excited to announce the launch of FUJIFILM Crystal Archive Digital Pearl paper. This is our new Pearl based material with a thicker base and higher stiffness.

FUJIFILM Crystal Archive Pearl paper yields a high gloss high quality image with a Pearl finish suitable for professional images such as portraits, fashion, commercial and food photography.

The material will offer the following benefits:-

- High Gloss and Pearl like appearance.
- High D-max.
- Large tonal range.
- Vibrant colour reproduction.
- Excellent latent image stability.
- Excellent archival permanence.

Label identification

Batch Information

The batch details of the new product are F01 – F99.

Backprint information

Non backprint material.

Printer Set Up

For FUJIFILM Frontier printing machines, a new LUT is required for the material to give optimised results. Please contact the FUJIFILM Imaging Support Services to request a LUT installer disc.

Other manufacturers Printers

If you require information on setting up other manufacturer's minilabs please contact FUJIFILM Imaging Support Services.

Please see the data sheet enclosed for D-max values and set up procedures for your large format equipment.

If you require a LUT or any other information, please contact the **FUJIFILM Image Support Services** on **01234 340040**, email: imaging support@fuji.co.uk or visit our website: www.FUJIFILM.co.uk/technical
